### RESOURCES FOR TEACHING MIDDLE SCHOOL SCIENCE

*National Academies Press* With age-appropriate, inquiry-centered curriculum materials and sound teaching practices, middle school science can capture the interest and energy of adolescent students and expand their understanding of the world around them. **Resources for Teaching Middle School Science**, developed by the National Science Resources Center (NSRC), is a valuable tool for identifying and selecting effective science curriculum materials that will engage students in grades 6 through 8. The volume describes more than 400 curriculum titles that are aligned with the National Science Education Standards. This completely new guide follows on the success of **Resources for Teaching Elementary School Science**, the first in the NSRC series of annotated guides to hands-on, inquiry-centered curriculum materials and other resources for science teachers. The curriculum materials in the new guide are grouped in five chapters by scientific area-Physical Science, Life Science, Environmental Science, Earth and Space Science, and Multidisciplinary and Applied Science. They are also grouped by type-core materials, supplementary units, and science activity books. Each annotation of curriculum material includes a recommended grade level, a description of the activities involved and of what students can be expected to learn, a list of accompanying materials, a reading level, and ordering information. The curriculum materials included in this book were selected by panels of teachers and scientists using evaluation criteria developed for the guide. The criteria reflect and incorporate goals and principles of the National Science Education Standards. The annotations designate the specific content standards on which these curriculum pieces focus. In addition to the curriculum chapters, the guide contains six chapters of diverse resources that are directly relevant to middle school science. Among these is a chapter on educational software and multimedia programs, chapters on books about science and teaching, directories and guides to science trade books, and periodicals for teachers and students. Another section features institutional resources. One chapter lists about 600 science centers, museums, and zoos where teachers can take middle school students for interactive science experiences. Another chapter describes nearly 140 professional associations and U.S. government agencies that offer resources and assistance. Authoritative, extensive, and thoroughly indexed-and the only guide of its kind-**Resources for Teaching Middle School Science** will be the most used book on the shelf for science teachers, school administrators, teacher trainers, science curriculum specialists, advocates of hands-on science teaching, and concerned parents.

Drawing on his extensive experience at IBM, Dr. Eric Olson shows how to systematically drive "win-win-win" gains: growing top-line revenue, helping customers increase efficiency, and improving the environment at the same time. Olson's business-focused guidance covers every step of your green business program, from strategy formulation through continuous improvement. He first offers a complete framework for approaching and formulating green strategy, using case studies to identify potential opportunities and business benefits. Next, using real case studies, he demonstrates how to define initiatives, construct roadmaps for transforming vision into reality, and link each investment to business strategy, so businesses can accurately measure results. Olson introduces powerful business process transformation methodologies and technologies for increasing operational efficiency and reducing waste, including IBM's breakthrough Green Sigma approach. He also identifies new opportunities to drive value by "instrumenting the planet," and introduces new technologies that make this possible. Finally, Olson assesses long-term trends that will make "green business" even more crucial in the coming years.
