HCI and Usability for e-Inclusion

5th Symposium of the Workgroup Human-Computer Interaction and Usability Engineering of the Austrian Computer Society, USAB 2009, Linz, Austria, November 9-10, 2009, Proceedings

Springer Science & Business Media The Workgroup Human-Computer Interaction & Usability Engineering (Arbeitskreis HCI&UE) of the Austrian Computer Society (Österreichische Computer Gesellschaft, OCG) has been serving as a platform for interdisciplinary exchange, research and development since February 2005. While human-computer interaction (HCI) traditionally brings psychologists and computer scientists together, the inclusion of usability engineering (UE), which is a software engineering discipline and ensures the appropriate implementation of applications, has become indispensable. Our 2009 topic was therefore Human-Computer Interaction & Usability for e-Inclusion (HCI4e-I), culminating in the 5th annual Usability Symposium USAB 2009 held during November 9-10, 2009 in Linz, Austria (<http://usab.icchp.org>), organized together with the Workgroup Information Technology for People with Special Needs (OCG Arbeitskreis IT für Menschen mit besonderen Bedürfnissen). The term e-inclusion, also known as digital inclusion, is used within the European Union to encompass all activities related to the achievement of an inclusive information society. New information technologies always bring the risk of a digital divide, and consequently e-Inclusion wants to put emphasis on a digital cohesion and on enhancing opportunities with IT into all segments of the European population, including disadvantaged people, e.g., due to lack of education (e-Competences, e-Learning), age (e-Ageing), gender apartheid (equality=e-Quality), disabilities (e-Accessibility), ill health (e-Health) etc. At the European level, e-Inclusion is part of the third pillar of the 2010 policy initiative, managed by the Directorate General for Information Society and Media of the European Commission.

New technologies offer tremendous opportunities for innovation and process improvement - but only if we understand the fundamental principles behind them. This is the goal of this book. To this end, we will be looking at how best to network the print media industry with its customers, production partners and suppliers. This networking process covers the production data that can be transferred entirely digitally as far as the press stage, i. e. the digital page to be printed (referred to below as the "technical work?ow"), but also the information, communication and interaction processes which take place before, during and after production, e. g. details of the print run or the planned delivery date (referred to below as the "business management work?ow"). Preservation in Digital Cartography

Archiving Aspects

Springer Science & Business Media This book "Preservation in Digital Cartography: Archiving Aspects" should give an overview on how to preserve digital cartographic appli- tions and geospatial data in a sustainable way. The intention of this book is to shape the opinion of affected parties and to bring together various d- ciplines. Therefore adjacent chapters will generally deal with information technologies, Service-Oriented Architectures, cybercartography, reprod- tion and historic cartography, which all together can be subsumed in p- spective cartographic heritage. The survival of this digital cartographic heritage will base on long-term preservation strategies that make use of - tensive dissemination on the one hand and sustainable digital archiving methods on the other. This includes a massive development of paradigm that expands from "store-and-save" to "keep-it-online". The paradigm "store-and-save" is mainly used for analogue masters that consist of st- age media, like vellum, and their visible content. Avoiding the storage - dia from degeneration in climate-controlled areas will help to keep the content accessible. In the digital domain the high interdependency of st- age media, format, device and applications leads to the paradigm "keep-- online" which for example describes the migration to new storage devices. In fact this expansion of paradigm means that the digital domain calls for ongoing actions in order to preserve cartography for a long term.
