## SAP Applications on IBM PowerVM

**IBM Redbooks IBM® invented the virtualization technology starting in the 1960s on the mainframe, and the functionalities evolved and were ported to other platforms and improved the reliability, availability, and serviceability (RAS) features. With virtualization, you achieve better asset utilization, reduced operating costs, and faster responsiveness to changing business demands. Every technology vendor in the SAP ecosystem understands virtualization as slightly different capabilities on different levels (storage and server hardware, processor, memory, I/O resources or the application, and so on). It is important to understand exactly what functionality is offered and how it supports the client's business requirements. In this IBM Redbooks® publication we focus on server virtualization technologies in the IBM Power Systems™ hardware, AIX®, IBM i, and Linux space and what they mean specifically for SAP applications running on this platform. SAP clients can leverage the technology that the IBM Power Systems platform offers. In this book, we describe the technologies and functions, what they mean, and how they apply to the SAP system landscape.**

# Making Global Value Chains Work for Development

**World Bank Publications** Economic, technological, and political shifts as well as changing business strategies have driven firms to unbundle production processes and disperse them across countries. Thanks to these changes, developing countries can now increase their participation in global value chains (GVCs) and thus become more competitive in agriculture, manufacturing and services. This is a paradigm shift from the 20th century when countries had to build the entire supply chain domestically to become competitive internationally. For policymakers, the focus is on boosting domestic value added and improving access to resources and technology while advancing development

goals. However, participating in global value chains does not automatically improve living standards and social conditions in a country. This requires not only improving the quality and quantity of production factors and redressing market failures, but also engineering equitable distributions of opportunities and outcomes - including employment, wages, work conditions, economic rights, gender equality, economic security, and protecting the environment. The internationalization of production processes helps with very few of these development challenges. Following this perspective, *Making Global Value Chains Work for Development* offers a strategic framework, analytical tools, and policy options to address this challenge. The book conceptualizes GVCs and makes it easier for policymakers and practitioners to discuss them and their implications for development. It shows why GVCs require fresh thinking; it serves as a repository of analytical tools; and it proposes a strategic framework to guide policymakers in identifying the key objectives of GVC participation and in selecting suitable economic strategies to achieve them.

Internal Combustion Engines

Performance, Fuel Economy and Emissions

Woodhead Publishing This book presents the papers from the Internal Combustion Engines: Performance, fuel economy and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and

alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO2 emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines' applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. presents the latest requirements and challenges for personal transport applications gives an insight into the technical advances and research going on in the IC Engines field provides the latest developments in compression and spark ignition engines for light and heavy-duty applications, automotive and other markets

## World Class Manufacturing: The Next Decade

### Building Power, Strength, and Value

**Simon and Schuster** Since the invention of double-entry bookkeeping, managers have judged a company's worth by sales and profits. Now, Richard J. Schonberger, the architect of the worldwide Just-In-Time revolution, reaches beyond "financials" to redefine excellence -- and reveals, with new benchmark data, how pioneers become dynasties. Schonberger's pathbreaking new research reveals that, from 1950 to 1995, while "financials" dipped and soared repeatedly, industrial decline and ascendancy correlated perfectly with inventory turnover -- one of two key nonfinancial indicators and a bedrock measure, along with customer satisfaction, of a company's power, strength, and value. In this immensely readable book, he captures these new metrics -- the true predictions of future success -- in 16 customer-focused principles created from self-scored reports supplied by over 100 pioneering manufacturers in nine countries. Armed with new world-class benchmark data, Schonberger redefines excellence in terms of competence, capability, and customer-focused, employee-driven, data-based performance. For front-line associates to senior executives, Schonberger has written manufacturing's action agenda for the next decade. This book will be

indispensable reading for manufacturing and general managers in all industries, as well as for pension fund managers, institutional investors, stock analysts, and stockbrokers.

## The Urban Transport Crisis in Emerging Economies

**Springer** This edited volume discusses urban transport issues, policies, and initiatives in twelve of the world's major emerging economies - Brazil, China, Colombia, India, Indonesia, Iran, Mexico, Nigeria, Russia, South Africa, Turkey, and Vietnam - countries with large populations that have recently experienced large changes in urban structure, motorization and all the associated social, economic, and environmental impacts in positive and negative senses. Contributions on each of these twelve countries focus on one or more major cities per country. This book aims to fill a gap in the transport literature that is crucial to understanding the needs of a large portion of the world's urban population, especially in view of the southward shift in economic power. Readers will develop a better understanding of urban transport problems and policies in nations where development levels are below those of richer countries (mainly in the northern hemisphere) but where the rate of economic growth is often increasing at a faster rate than the wealthiest nations.
