MARINE FISHERIES REVIEW

VERBAL BEHAVIOR

B. F. Skinner Foundation In 1934, at the age of 30, B. F. Skinner found himself at a dinner sitting next to Professor Alfred North Whitehead. Never one to lose an opportunity to promote behaviorism, Skinner expounded its main tenets to the distinguished philosopher. Whitehead acknowledged that science might account for most of human behavior but he would not include verbal behavior. He ended the discussion with a challenge: "Let me see you," he said, "account for my behavior as I sit here saying, 'No black scorpion is falling upon this table.'" The next morning Skinner began this book. It took him over twenty years to complete. This book extends the laboratory-based principles of selection by consequences to account for what people say, write, gesture, and think. Skinner argues that verbal behavior requires a separate analysis because it does not operate on the environment directly, but rather through the behavior of other people in a verbal community. He illustrates his thesis with examples from literature, the arts, and sciences, as well as from his own verbal behavior and that of his colleagues and children. Perhaps it is because this theoretical work provides a way to approach that most human of human behavior that Skinner often called Verbal Behavior his most important work.

THE PSYCHOLOGY OF FAKE NEWS

ACCEPTING, SHARING, AND CORRECTING MISINFORMATION

Routledge This volume examines the phenomenon of fake news by bringing together leading experts from different fields within psychology and related areas, and explores what has become a prominent feature of public discourse since the first Brexit referendum and the 2016 US election campaign. Dealing with misinformation is important in many areas of daily life, including politics, the marketplace, health communication, journalism, education, and science. In a general climate where facts and misinformation blur, and are intentionally blurred, this book asks what determines whether people accept and share (mis)information, and what can be done to counter misinformation? All three of these aspects need to be understood in the context of online social networks, which have fundamentally changed the way information is produced, consumed, and transmitted. The contributions within this volume summarize the most up-to-date empirical findings, theories, and applications and discuss cutting-edge ideas and future directions of interventions to counter fake news. Also providing guidance on how to handle misinformation in an age of "alternative facts", this is a fascinating and vital reading for students and academics in psychology, communication, and political science and for professionals including policy makers and journalists.

QUALITATIVE RESEARCHING

SAGE The third edition of this best-selling text guides students and researchers through the process of doing qualitative research, clearly explaining how different theoretical approaches inform what you do in practice. The text bridges the gap between 'cookbook' and more abstract approaches to qualitative research, by posing 'difficult questions' that researchers should be asking themselves . The book invites researchers to engage in a creative and critical practice in how they draw insights, interpret a range of types of data and craft knowledge from qualitative research. Fully revised and updated, with three new chapters, this edition: · Covers the full research process, with new material on analysing and interpreting data and research ethics · Engages with exciting new developments in the field through challenging qualitative researchers to be creative with how they research and with what they find. · Examines the potential of qualitatively-led approaches to mixed methods, and their implications for research design, research practice and the production of convincing arguments. A theoretically engaged, grounded approach to qualitative researching, this remains the ideal text to guide students to become thoughtful, creative and effective qualitative researchers.

LIVING A FEMINIST LIFE

Duke University Press *In Living a Feminist Life Sara Ahmed shows how feminist theory is generated from everyday life and the ordinary experiences of being a feminist at home and at work. Building on legacies of feminist of color scholarship in particular, Ahmed offers a poetic and personal meditation on how feminists become estranged from worlds they critique—often by naming and calling attention to problems—and how feminists learn about worlds from their efforts to transform them. Ahmed also provides her most sustained commentary on the figure of the feminist killjoy introduced in her earlier work while showing how feminists create inventive solutions—such as forming support systems—to survive the shattering experiences of facing the walls of racism and sexism. The killjoy survival kit and killjoy manifesto, with which the book concludes, supply practical tools for how to live a feminist life, thereby strengthening the ties between the inventive creation of feminist theory and living a life that sustains it.*

CORPUS LINGUISTICS

A GUIDE TO THE METHODOLOGY

Language Science Press Corpora are used widely in linguistics, but not always wisely. This book attempts to frame corpus linguistics systematically as a variant of the observational method. The first part introduces the reader to the general methodological discussions surrounding corpus data as well as the practice of doing corpus linguistics, including issues such as the scientific research cycle, research design, extraction of corpus data and statistical evaluation. The second part consists of a number of case studies from the main areas of corpus linguistics (lexical associations, morphology, grammar, text and metaphor), surveying the range of issues studied in corpus linguistics while at the same time showing how they fit into the methodology outlined in the first part.

STORIES OF YOUR LIFE AND OTHERS

Pan Macmillan 'A science fiction genius . . . Ted Chiang is a superstar.' GUARDIAN With Stories of Your Life and Others, his masterful first collection, multiple-award-winning author Ted Chiang deftly blends human emotion and scientific rationalism in eight remarkably diverse stories, all told in his trademark precise and evocative prose. From a soaring Babylonian tower that connects a flat Earth with the firmament above, to a world where angelic visitations are a wondrous and terrifying part of everyday life; from a neural modification that eliminates the appeal of physical beauty, to an alien language that challenges our very perception of time and reality, Chiang's rigorously imagined fantasias invite us to question our understanding of the universe and our place in it. 'United by a humane intelligence that speaks very directly to the reader, and makes us experience each story with immediacy and Chiang's calm passion.' CHINA MIÉVILLE

BIOPHYSICS

SEARCHING FOR PRINCIPLES

Princeton University Press Interactions between the fields of physics and biology reach back over a century, and some of the most significant developments in biology--from the discovery of DNA's structure to imaging of the human brain--have involved collaboration across this disciplinary boundary. For a new generation of physicists, the phenomena of life pose exciting challenges to physics itself, and biophysics has emerged as an important subfield of this discipline. Here, William Bialek provides the first graduate-level introduction to biophysics aimed at physics students. Bialek begins by exploring how photon counting in vision offers important lessons about the opportunities for quantitative, physics-style experiments on diverse biological phenomena. He draws from these lessons three general physical principles--the importance of noise, the need to understand the extraordinary performance of living systems without appealing to finely tuned parameters, and the critical role of the representation and flow of information in the business of life. Bialek then applies these principles to a broad range of phenomena, including the control of gene expression, perception and memory, protein folding, the mechanics of the inner ear, the dynamics of biochemical reactions, and pattern formation in developing embryos. Featuring numerous problems and exercises throughout, Biophysics emphasizes the unifying power of abstract physical principles to motivate new and novel experiments on biological systems. Covers a range of biological phenomena from the physicist's perspective Features 200 problems Draws on statistical mechanics, quantum mechanics, and related mathematical concepts Includes an annotated bibliography and detailed appendixes Instructor's manual (available only to teachers)

THE CRAFT OF POETRY

DIALOGUES ON MINIMAL INTERPRETATION

Routledge This book presents an innovative format for poetry criticism that its authors call "dialogical poetics." This approach shows that readings of poems, which in academic literary criticism often look like a product of settled knowledge, are in reality a continual negotiation between readers. But Derek Attridge and Henry Staten agree to rein in their own interpretive ingenuity and "minimally interpret" poems - reading them with careful regard for what the poem can be shown to actually say, in detail and as a whole, from opening to closure. Based on a series of emails, the book explores a number of topics in the reading of poetry, including historical and intellectual context, modernist difficulty, the role of criticism, and translation. This highly readable book will appeal to anyone who enjoys poetry, offering an inspiring resource for students whilst also mounting a challenge to some of the approaches to poetry

currently widespread in the academy.
